

JUST SOUTH OF MEMPHIS, TENN. FOUR DEAD. FOURTEEN MISSING

First Seat of Humans
Santa Barbara, Cal.—H. S. Gladwin, honorary curator of the Santa Barbara Museum of Natural History, and D. B. Rogers, formerly of the Smithsonian institution, and now of the local museum staff, announce that recent discoveries show to their satisfaction that the first home of the human race in the western hemisphere was the site of Santa Barbara and neighboring communities.

Rio de Janeiro.—Father Lucas, a Catholic priest, is the inventor of a machine for writing-music. He has passed thirteen years in perfecting the apparatus, which is now exhibited locally. It is built on the pattern of a typewriter, with a similar keyboard, and an arrangement near the roller for drawing the lines of the staff.

This old car, recently found in the Western Maryland railroad yard at Port Covington, Md., by the Lincoln Highway association, has been identified as the car in which President Lincoln rode to the Battlefield of Gettysburg and in which he wrote his immortal Gettysburg address. It is now the home of a watchman.

HOUSE CLEANING
Any Draperies or Rugs to be cleaned? Relieve yourself of the worry. Call BARNHILL'S.

Photography reveals many things about lighting. One is that a great many flashes are multiple, consisting of several discharges in rapid succession along the same path, says Nature Magazine. These flashes are studied by means of a camera mounted on a vertical axis and turned from side to side by clockwork. The pictures are taken at night, the shutter being left open until a flash occurs.

Swarming Bees Are Controlled

Artificial Division of Colony Will Check Impulse Until Nectar Flows.

It is the desire of every beekeeper to keep his bees from swarming, since it is the strong colony that is the profitable honey gatherer. No plan has ever been devised to prevent swarming altogether, but artificial division of the colony will check the impulse until after the heavy flow of nectar. What is known as "shock" swarming is possibly the best method yet devised for keeping the bees together in one strong colony for gathering surplus honey.

Change Quarters.
At the first indication of swarming, which may be known by their lying out in front of the hive and general restlessness, as well as by the presence of sealed queen cells, preparations should be made for changing their quarters, writes H. F. Grinstead in the Farm and Ranch. Fill an empty hive with frames of comb foundation, remove the hive containing the bees from its stand and put the empty hive in its place. Now take out the frames of bees one by one, and brush the bees off on a board at the entrance to the empty hive. The bees with their queen will enter the new hive with the comb foundation and immediately set to work just as a new swarm would do, except that you have all the bees instead of having them divided into two colonies. They will have lost all desire for swarming, and will devote their energies toward storing surplus honey at a time when it is most abundant. The bees that are out in the field will likewise return to their old stand and enter the new hive along with the others. There will be young bees in the comb, and also some honey. It will be worth while to save the young bees, which can be done by setting aside the hive until they hatch, then emptying them also in front of the colony. All of them will hatch in less than 21 days. The honey can be saved later or a part of it can be cut out at the time. Also a few of the better combs, the ones that do not contain queen cells, may be transferred to the new hive along with the bees.

No Inclination to Swarm.
Bees handled in this way will have little inclination to swarm if room is given them by adding a super as soon as they need it. Of course, if the desire is to increase the number of colonies, a part of the bees would be left on the combs. In either instance, the beekeeper eliminates the uncertainty of losing a swarm.

Weeds Use Up Fertility and Reduce Crop Yields

The use of high-grade seeds of farm crops is vital to successful farming. Weed seeds planted are paid for at the price of crop seeds; are sown and cultivated at the same cost as crop seeds. In return they are either scattered on the field to reduce the next crop or remain in the harvested crop and reduce its value.

Actual count of seeds from individual plants show that no farmer can afford to plant weed seeds. A single plant of green fox tail produced 140,000 seeds, a plant of lamb's quarters produced 600,000, a single tumbleweed produced 6,000,000. The most pernicious weeds have been introduced in farming communities through their occurrence in crop seeds. Because of the enormous number of seeds produced by weeds every farmer should have his seed tested to see that it is reasonably free from such seeds. In addition to examination of seed for weed seeds it should also be tested for germination, for upon viability of seed depends the stand and hence the yield.

Interesting Information About Value of Manure

The value of manure depends upon many things—the percentage of straw and moisture, the treatment it has received, the length of time held, the kind of crops it is to be used upon and how it is applied. But in a general way, the Maryland station has arrived at the conclusion that a ton of manure for field crops is worth around \$5.28 and for truck crops \$8.65. The conclusions were arrived at after twenty-one years of tests.

They discovered other interesting information about manure. Light applications usually give larger returns from a ton of manure than do heavy applications. Where the supply of manure is limited it is better practice to make several light applications than a few heavy ones. Manure hauled directly to the field and spread gave better results than where hauled out and allowed to rot in piles. Manure applied to soil that has been tilled, gave larger returns than on unplowed land. The addition of phosphorus also increased the efficiency of manure.

Prevention Is Best

Prevention of trouble is the only satisfactory way to brood chicks. Disease and parasites are prevented by starting chicks on fresh ground each year. The picking, bunching, and stunted chicks are prevented by not crowding too many chicks into too small a space. Heavy losses and weak vigor are prevented by allowing the chicks to grow normally in comfortable surroundings. Providing comfortable brooders for the chicks will prevent losses.

FILLING STATION OPEN.
The Columbus Oil Filling station on North Court street near Hargus creek culvert, which has been closed for the past six months owing to the new work being done at the bridge is now open for business. This station sells the famous Silver Flash gasoline and motor oil and invites the patronage of their former customers and many new ones.

MACK'S SHOE SHOP

"GOOD SHOES FOR LESS"

His Dog His Instructor
Here's a worth-while dog story, as told in the Winamac (Ga.) Republican: "John Moorman was talking the other day about modern sports and old-time sports—basketball and dog fights. Said John: 'When I was a kid I had a dog that was scrappy, and was my instructor in philosophy and values of life as well. My dog didn't always lick his opponent in battle, but when he himself received a drubbing he didn't whine around the house and at his master's heels, but crawled way back, under the kitchen and stayed there, without food or further comfort until his wounds were healed. Then he emerged, took a full meal, and was ready again with pep and vigor to meet the world's problems. When he was licked "he went way back and sat down," and in the solitude was able to get his bearings and meet his further tasks with decision.'"

Rockefeller as a Loafer
When I asked Mr. Rockefeller to what he chiefly attributed his success, he instantly replied, "To others," writes C. B. Forbes in Hearst's International-Cosmopolitan. "Ever since my early manhood I have been a loafer," said Mr. Rockefeller. "While the newspapers were picturing me as a slave to business, working day and night, the truth is that I wasn't working hard at all—at least, not at business. I was working hard very often, but not at 26 Broadway or at any other place of business, but at my home, near Cleveland, where my special hobby was the transplanting of trees, and where I did a lot of gardening. I left others to do the hard work. After middle age I rarely ever visited the office, and it is many years since I did any work whatsoever there."

Ensemble Outfit That Is Popular for Spring

This ensemble, consisting of coat in faille and dress in crepe de chine, was exhibited at the spring fashion show recently held in New York. The dress has the new inverted plait and the skirt shows a belt of the material.

Linen and Cotton—How to Discover Difference

Cotton now is made to look so much like linen that it passes close scrutiny with any but an expert, says a correspondent in the Kansas City Star.

The shopper finds her best protection in the reputable merchant who knows pure linen from union goods or mercerized cotton, but there are many clerks who are not aware that in selling cheap table linen they are selling cotton that is finished to look like linen. Often the finishing is done so skillfully that it is almost impossible to detect it until the material has been washed, when the frizzy ends of the cotton fibers will show up on the surface of the cloth.

It is not always an advantage to insist on an all-linen material, however. If the choice lies between a thin, heavily sized linen woven from the broken and short ends of poor flax, and a good union or mercerized cotton, it would be a far wiser purchase to get the excellent quality of cotton, especially when the effect is so perfect and beautiful that none but an expert can tell the difference.

Nevertheless, if a woman has set her heart upon stocking her chests and closets with real linen, and is willing to pay the price to get the genuine article, she wants to be able to recognize linen when she sees it. When a cloth which resembles linen is very cheap—real linen is expensive—and feels stiff and crackly, rather than tough, pliable and leathery, it is just as well to subject it to some more rigid tests before buying.

The old-fashioned custom of moistening the finger and putting it under the linen is no longer a reliable test. Often the moisture will come through a heavy linen or one with much starch in it, while it will not come through a sheer, tightly woven cotton; and then many of the damasks contain materials in the finish—certain gums and oils, for example—that are not soluble in water. Thus a fine, good grade of linen might be cast aside after applying the saliva test.

A better way is to put a drop of olive oil or glycerine on the material, and press it between blotting paper. A fine piece of linen will become translucent when treated with olive oil, but if there is too much starch, or the material is cotton, it will remain opaque.

It is easy enough to make the "light test." Hold the fabric up to the light and look through it. Cotton threads are even and uniform, linen threads are uneven and streaked. However, cotton is sometimes spun to make an uneven yarn, imitating the natural irregularities of the linen thread. The "tearing test" is surer. Cotton cloth does not tear quickly, the edges curl up, does not sound shrill, and the ends show short, curly, tufted, and lusterless. On the other hand, linen tears straight and smooth, with a shrill sound. If cotton thread is broken quickly the end curls up; if a linen thread is broken quickly the ends remain straight.

When a lighted match is applied to a cotton thread it burns quickly and is hard to blow out; linen burns more slowly and smolders.

New Spring Coat May Be Straight or Flared

In coats the two silhouettes are distinctly defined, a group of straight coats on the one hand and flared styles on the other.

The front fullness and flat-back type is pronounced in coats.

The tailored coat, with notch or shawl collar, double-breasted closing and mannish coat sleeve, is prominently featured.

A semi-tailored style has the above severe features for the upper part of the garment, with a deep band of fur on the bottom, or a plaited or flared finish, that makes the garment below the waistline seem inconsistent with the tailored style above.

KATHERINE LENROOT

Miss Katherine Lenroot, daughter of Senator Irvine L. Lenroot, of Wisconsin, who holds the important post of assistant chief of the woman's bureau of the Department of Labor, has been given a 50 per cent pay increase under the new classification law for government employees. Her salary was increased from \$3,500 to \$5,200.

"Radioed" Message

An up-to-date way of informing the teacher of an enforced absence from a class session at White Plains (N. Y.), high school was used by William Meyers. He radioed that he would be absent. He went to the home of a neighbor and used his sending station, 2-BQB, to tell the head of the science department that he could not attend school. The message was received on the school sending and receiving station.

The time is passed when the measure of the value of a memorial is quantity. I hope the time has come when that measure is quality. I care not whether the material be marble or granite, its future will be measured by the character of the design. It is quality that has preserved for us the finest examples in painting and sculpture. It is quality that will stamp our imprint upon cemeteries of the future. Simplicity, correct lines and proportions and proper ornamentation are the real fundamentals. A design that is right, material that is lasting, and perfect workmanship, spells success for the future of this industry and the beautification of the cemetery. Will you let me help you select the memorial for your lot. Call at show room. **NO AGENTS.**

Things Evidently on

Move in Pruntytown

"How are things coming on, these days?" asked a guest who visited the hamlet sufficiently often to be mildly interested in the happenings there.

"Lively! Lively!" triumphantly replied the landlord of the Pruntytown tavern. "A lady got divorced and was remarried within fourteen minutes, tuther day; another lady horsewhipped a gentleman for something or nuther, I didn't learn what, right in front of the post office; when a real keen picture is shown at the Oriental Grotto you hafta cross over to the opposite side of the street to get by until the second show starts; the boys and girls are parading the streets day after day and far into the night; we've got 'way past Maw Jonng and are neck deep in the cross-roads puzzle. Why, by glory, I look for our progressive little city to be arrested 'most any minute for exceeding the speed limit!"

—Kansas City Star.

Optimism

Harry Carey's little son Dobe is an enthusiastic motorist and when any of the hands make the round of the Carey ranch in the family fly, Dobe is sure to go along.

To enter the Carey place you climb a modest grade into Gunsite pass and after a rain it's a slippery, tricky piece of road. Thus it came about that the flyver slipped and slid and finally stalled just before it reached the top of the grade.

"Gee whiz," said Dobe, "one more shiver an' I bet we'd a made her."—Los Angeles Herald.

Quite Different

"Did you say that Skinner succeeded by getting around him better men than himself?"

"No, by getting around better men than himself."—Boston Transcript.

Ability to Do

OHIOANS TO ATTEND CO-OPERATIVE SCHOOL

American Institute of Co-operation, Planned for Mid-Summer, Is First of Its Kind.

Leaders of a number of Ohio co-operative farm marketing associations are expected to attend the American Institute of Co-operation which will be held this summer, reports reaching the offices of the Ohio Farm Bureau Federation indicate. The Institute is the first of its kind held in the country and has the backing of co-operative organizations in all parts of the country.

Four weeks will be spent by those attending the school at the University of Pennsylvania, Philadelphia, from July 20 to August 15. The four weeks' course will include lectures and discussions on every phase of co-operation, both principles and practices. Discussions and classes will be led by authorities who have had long experience in co-operative work.

The Institute is incorporated and is operated by a board of 21 trustees. A budget of \$30,000 to which the Ohio Farm Bureau Federation is contributing is being raised to support the holding of the school.

MEXICO CITY IS IN GREAT DANGER

Structures Begin to Sink and Engineers Warn of Peril.

Mexico City.—Mexican architects and builders believe there is more than a possibility that this city may eventually sink back into the ooze of the ancient lake over which it is built. Indeed, there is visual evidence that the sinking process is one which is now under way, for some of the more prominent edifices of the city already are tilted at a crazy angle and others have settled well below the surface of the street.

Mexico City's 1,000,000 inhabitants were startled recently by articles in "Excelsior" in which the softness of the mattress-like bottom on which the capital of Mexico is built is discussed by leading builders. Pictures of the gradual sinking of heavy buildings into the soft earth are shown, suggesting the possibility that some day the valley of Mexico may again become a lake with such islands as the Aztecs found when they built their ancient capital of Tenochtitlan. However, the very conditions which may some day mean the undoing of Mexico City have in the past repeatedly saved it from earthquake destruction and prevented the loss of many lives.

Located in a broad valley at an altitude of 8,000 feet and encircled by mountains, this city is built on a formation which has been best described as a giant mattress.

Pressure Threatens Disaster. But the pressure of heavy buildings on this soft earth is now in evidence in many portions of the city, and more so in recent years, when miniature skyscrapers have begun to appear among the time-worn two-story structures. Some of these are well below the level of the sidewalks.

The most notable of these, which resembles the famous leaning tower of Pisa, is the Church of Loretto, one of the oldest edifices in the city, which has sunk on one side to the extent of several feet. Its tower now inclines at an apparently dangerous angle. Another fine structure, the Cathedral of Mexico, the largest cathedral in the Western hemisphere and a monument of colonial construction, has partly buried itself in the earth.

The uncompleted National theater, a costly building, in which 12,000,000 pesos have so far been invested, rapidly is sinking, and desperate efforts are now being made to prevent it from further submergence into the bottom of the former lake. Engineers are daily injecting tons of cement below the foundations in the hope of forming artificial rock. Heavy rubber, steel encased piping is forced below the foundations and cement passed through to the soft sand below. A five-story hotel in the city is two feet below the sidewalk. The foreign office building, completed last year, already is below the level of the street. In cases where heavy buildings flank lighter structures the latter suffer considerably from side pressure. The Mexico City sewage system is in a lamentable state of decomposition.

Monument Base Sinks. Fifteen years ago the Statue of Independence was erected, and after six years of work it was found that one side of the base, with a diameter of some 200 yards, had sunk more than one yard. The entire statue was torn down, foundation torn out and a firmer base placed, which kept the monument perpendicular. In a recently constructed building, which cost 1,000,000 pesos, more than half the cost went into the foundation, and although the building in question is not yet completed it has sunk in one year a number of inches below the street.

Twenty years ago Mexico City chiefly was built on the original islands of the Aztec lake and half of what today is city, mainly residential district, was then a swamp. A hole less than three yards deep bored at almost any spot in Mexico City will reveal water. This condition tends to weaken foundations and assists in the general sinkage of the capital.

Prominent local engineers and contractors openly express the fear that "some day the valley of Mexico will reconverge itself into its original lake." The experts seem at a loss to offer any remedy.

Finnish Women Organize for Military Service

Helsingfors, Finland.—Two hundred thousand Finnish women are organized into Lotta Svaerd clubs, auxiliaries to the voluntary military organizations of men, and are in constant training to support the standing army in case of emergency.

The women are organized on a military basis and participate in maneuvers of the volunteer forces so that they may be prepared to carry on all work for which women are qualified in time of war.

During the drills the women wear coarse gray garments and sleep on straw, just as the men volunteers do, so as to accustom themselves to the hardships of military service.

The fighting between the Red and White forces which followed the establishment of the Russian soviet government saw much of Finland involved in the bitterest sort of civil strife. Railway communications were severed for months, and the entire population was involved in conflict.

HIS PARTING SHOT

The old orthodoxy will find small comfort in the utterances of Dean Inge, who just has concluded his lecture tour in this country.

In his last lecture, before departing homeward, the distinguished British clergyman addressed his remarks to the ministers of all faiths, advising them that, for the most part, their lives suggested nothing more than "a life of serving at tables." He warned them that it is not the number of heads in a congregation that indicates "the best minister."

"The church is a fighting minority," said the dean. "Christ never preached a political revolution. His kingdom was not of this world. The prophets in the Old Testament did enter the troubled waters of social teaching which our Lord seemed to pass over dry-shod."

"In science has come the chief revelation of the will and purpose of God that has been given to our time. It is more important that the preacher understand the results of science than that he associated with social revolution."

Such admonition will invite bitter protest from many among prominent controversialists. Among the fundamentalists the name of the dean will henceforth be anathema. But he speaks with the calm utterance of one, who has balanced and weighed in the scales of reason and judgment all evidence essential to the determination of truth, in so far as men may realize truth assisted by the indispensable factor of faith.

In conclusion Dean Inge declared: "There is a great temptation within the church for the churches to decide against science, but there is no reason for this old feud between sentiment and science to continue. * * * The fundamentalists are the real materialists. They lay heavy burdens on men's shoulders—burdens that are no part of the burden of the cross."

"Science has introduced a new social decalogue. Men of science are today sincerely anxious to make their contributions to the welfare of society and their motives are just as pure as those of religious teachers."

Science is the great revealer; its truths bring God nearer to

man. Religion is the great comforter; it enables man to understand and profit by that love which is from everlasting to everlasting."

Houses Built in Day

Modern four-room dwellings, built of nonburning materials covered with a thin veneer of metal, are being erected completely in 24 hours by builders of Budapest, Hungary. Although the homes are inexpensive, says Popular Mechanics Magazine, it is claimed they have the advantage of being protected against fire and will last over a long period of time without the need of repair. The parts of the structures are all designed and prepared before construction is started so that the pieces may be quickly slipped into place and fastened without further fitting or cutting. The method is reported to have been copied from that employed in the manufacture of toy houses made from sheet metal.

When Tipping May Stop

Tipping can be absolutely stopped when everybody is perfectly satisfied to be treated no better than anybody else.—Boston Globe.

Delicious!

A missionary was preaching in one of the islands where man-eating is practiced and was captured by a skeptical chief. To his surprise he was immediately released, but on the condition that he carry a small sealed packet to a neighboring mountain chief. The missionary was so grateful that, meeting a detachment of English sailors from a battle cruiser, he declined to accompany them to safer territory. The sealed packet should be delivered as he had promised. But an officer in the midst of the discussion opened it (writes Charnian London in "Jack London"). Therein, tucked among some small onions, was a message to the chief: "The bearer will be delicious with these."—Tit-Bits.

AMUSEMENTS

"Salome of the Tenements," produced by Sidney Olcott for Paramount from the novel by Anzia Yezierska, who wrote "Hungry Hearts" and other just as successful stories, comes to the Met on Monday for two days.

Jetta Goudal, French beauty seen in "Open All Night," Godfrey Tearle, Conway's brother, and Jose Ruben are featured in the cast.

The story is one of Sonya Mendel, nicknamed Salome of New York's tenement district. She meets and falls in love with a young millionaire who has established a settlement house in her neighborhood and has sacrificed a comfortable home and social position to live there and help brighten the lives of the inhabitants of Manhattan's Ghetto district.

Sonya borrows money from an unscrupulous usurer to make an impression on her philanthropic friend and by so doing almost ruins her chances for happiness—and love.

"Salome of the Tenements" is a picture with an appeal not unlike that of "Humoresque." It's real!

The Brute.

Popperton—"The wife has gone shopping and left me in charge of the baby, and I'm blest if I know how to keep the beggar quiet." Grimshaw (after critically regarding the howling juvenile)—"I should think you could easily keep him quiet, both in a vocal and physical way, by gagging him carefully, tying his hands behind his back, binding his feet together, calling his clothes to the floor, and then administering chloroform to him."

Could Raise Something

"Say," said the nervy young man, entering a barber shop, "is my credit good for a shave?" "Naw," replied the barber, "if you can't raise a quarter keep on raising whiskers."—Boston Transcript.

TELESCOPE REVEALS
FOUR BILLION STARS

Observatory to Bare Wonders of Firmament.

Seattle.—This city soon is to have the largest stellar telescope in the world and the greatest astronomical observatory, in the gift of Charles H. Frye, capitalist. The plant for the huge mirror, which will be open to the public during the summer, now is being erected.

The task of preparing the mammoth speculum, the largest ever cast in the world, is being completed by T. S. M. Sheridan, Canadian astronomer and telescope builder, in specially constructed shops in Vancouver, B. C. The great mirror, 120 inches in diameter, must be ground down by hand work until it possesses the correct focal curvature.

Other Big Ones.

The largest existing telescope today is the instrument at the Mount Wilson observatory, mounting a 100-inch speculum. The next in size, 73 inches across, is at Little Sannich, B. C., Canada.

The Frye observatory is remarkable for several features. It is the first erected primarily for public education. The mirror is the first large optical lens ever cast on the North American continent. The observatory itself will contain a collection of astronomical photographs gathered from every part of the world.

There are about 5,000 stars visible on a clear night to the naked eye. A 60-inch reflector makes 219,000,000 stars visible. The Mount Wilson speculum brings into view 320,000,000, while the big Frye telescope will, according to conservative estimates, make visible at least 400,000,000 of the twentieth magnitude or outside the farthest boundaries of the universe, as the best imagination of man conceives the universe.

Huge Dome.

A huge dome 100 feet in diameter and 150 feet in height will house the heavy machinery used to manipulate the ponderous reflector and refractors of the big telescope.

Scientists are awaiting anxiously the completion of the mirror in the hope of viewing Mars and several other planets which will be in favorable oppositions to the earth this summer and autumn.

40-Room Residence

Moved Three Miles

Los Angeles, Cal.—Another feat in house moving was completed recently by moving a 40-room residence valued at \$150,000 a distance of three miles in three nights without interruption to traffic on one of the city's most-used boulevards.

The dwelling is the largest dwelling of its kind moved from one foundation to another in the United States.

To enable the dwelling to be transported quickly and without suspension to traffic, the house was sawed into three sections, one of which was moved from the old foundation each night between midnight and dawn. Sawing the house and jacking up the individual sections required about six weeks. After the three parts were on the new foundation the house was assembled into one building again.

Forty workmen were employed in moving the dwelling, which is of frame construction. A large truck, especially designed for transporting large structures, rolled the sections to the new foundation constructed for the dwelling.

Mercy Aid in New York

Totals \$80,000,000 Year

New York.—New York spends \$80,000,000 a year to alleviate poverty, sickness and other misfortune.

This was the estimate contained in a partial report issued by the co-ordination committee, of which Robert W. De Forest is chairman, which has been working nearly a year on a plan for better co-ordination among the city's 2,000 public and private welfare agencies.

Of \$31,678,984 appropriated by the city government, the department of public welfare spent \$7,910,086 during the typical year selected by the committee. The health department expended \$5,478,641, board of child welfare \$4,136,559; Bellevue and allied hospitals, \$2,848,905; parks and playgrounds, \$3,801,890. Grants to private charitable institutions totaled \$7,391,175.

Munich Stenographers

Sell Funeral Orations

Munich.—Stenographers out of jobs in Munich have found a source of revenue in the local cemeteries. It is their custom to attend all funerals and take down the words of the officiating clergyman. These they transcribe neatly on mourning paper with a black border, and then offer their work to the relatives of the deceased. In almost every case the relatives buy not only the first transcript, but often order a considerable number of carbon copies.

Find Lincoln Car

Baltimore.—The railroad coach in which Lincoln rode to Gettysburg to deliver his famous address on the battlefield in 1864 was found on a siding in the yards of the Western Maryland railway. The historic but dilapidated car was discovered by a Pennsylvania committee of the Lincoln Highway association that visited Baltimore.

SERVICES IN
CHURCHES

Times and Places Our
People Will Worship
On Sunday.

Subject of Sermons on Which
Pastors Will Preach Morn-
ing and Evening—Other
Meetings of a Religious
Character.

ST. JOSEPH'S CHURCH.

Rev. Father J. S. Hannan, Pastor.
West Mound Street.

Low mass at 7:30. High mass with sermon followed by benediction at 9:30.

ST. PHILIP'S CHURCH.

Robert Lee Baird, Rector.
West Mound Street.

(Fourth Sunday after Easter)

Holy communion 8. Church school at 9. Morning prayer and sermon at 10. The preacher will be the Rev. B. H. Reinheimer, of Columbus. Evening prayer and sermon at 7:30.

CALVARY EVANGELICAL CHURCH

E. A. Tovey, Pastor.
Corner Washington and Mill Sts.

Mr. C. O. Leist, S. S. Supt.

The Bible school will open at 9 o'clock. There will be a Mothers' Day service at 10:15, also preaching service at 7 o'clock. The Junior E. L. C. E. will meet at 2 p. m., and the Seniors at 6:45. The W. M. S. will hold their monthly meeting on Monday evening. Prayer service Wednesday evening at 7:30 p. m.

UNITED BRETHREN CHURCH

Rev. S. W. Hiles, Pastor.
East Main St.

Sunday school 9:15. E. S. Neuding superintendent. We hope all our members will plan to be present at this Mothers' Day. If you are not attending elsewhere we invite you to come. All are welcome. A class for every age. Our school has been increasing in interest and attendance. Come and help the work along. Morning worship at 10:30. Special music. Sermon subject: "A Church—or Our Church." We would like to have every member of the church present at this service. All others also welcome. Christian Endeavor at 6:30. Mr. H. D. Kraft, president. Evening service at 7:30. This is "Anniversary Day" for our Christian Endeavor and our young people will have charge. A good program has been prepared. An offering will be taken which will go to our general C. E. work. Our orchestra is fine, come and see. Prayer meeting Wednesday evening at 7:30. Our general conference will meet at Buffalo Thursday, May 14, and close May 24. There will be over two hundred delegates in attendance. Mr. E. S. Neuding of the local church is one of the lay delegates from Southeast Ohio conference and Rev. A. B. Cox of Columbus, former local pastor is one of the ministerial delegates. They will go to Buffalo next Wednesday.

FIRST M. E. CHURCH.

Rev. E. K. Johnson, Pastor.
East Main St.

Sunday school at 9 a. m. Morning worship at 10:30. Sermon in observance of Mothers' Day. Epworth League at 6:30 p. m. Evening worship at 7:30 o'clock. Stereopticon lecture on Porto Rico which is part of the Home Missions parish of the Lancaster district. Special music at all services. The Epworth League program follows: Prelude—"Serenade"—Shubert ... Miss Kathryn Sanders Doxology (standing) Call to Worship—Page 9 Hymn No. 194—"Father Hear Our Prayer"—Carter Prayer ... Mr. C. R. Barnhart Hymn No. 189—"The Son of God"—Cutler "Minuet"—Haydn Harmony Sextette Scripture Lesson 23d Psalm (unison) Announcements Offertory—"Melodies"—Chopin ... Miss Sanders Address ... Miss Flora Dunlap "Salut d'Amour"—Elgar ... Harmony Sextette Epworth League Benediction

TRINITY LUTHERAN CHURCH.

Rev. G. J. Troutman, Pastor.
East Mound St.

Sunday school at 9 o'clock in connection with a short address on the subject "Mother." Regular service at 10:15 subject: "Four Kind of Givers." Preaching at Lick Run at 2:30. Benediction.

calauale sermon will be preached in the Washington township school auditorium at 7:30. No evening service. Von Bora society meets Monday evening. Teachers meeting and Luther League meet Friday evening.

CHURCH OF THE BRETHREN.

Corner Pickaway and Logan Sts.
Rev. C. V. Coppock, Pastor.

Church school convenes Sunday morning at 9:30 for Bible teaching, there will be a place for you in one of the several departments. As it is the pastors day in Bremen, there will not be preaching in the morning. Mothers and Daughters will have charge of the evening program in commemoration of the day. Of all earthly names, "Mother" is most dear, let us all honor her on this special day, be with us at 7:15 for this service. Wednesday evening at 7 o'clock we meet for prayer and Bible study. Teachers meet at 7 for training.

MOTHERS' DAY OBSERVANCE.

To members and friends of the Methodist Episcopal Sunday school: Each department in the Methodist Sunday school will observe Mothers' Day. Honor your mother by being present May 10, 1925, at 9 a. m. Committee.

THE PRESBYTERIAN CHURCH

Floyd Emerson Logee, Pastor
East Mound St.

Sunday school is at 9 o'clock followed by the morning worship at 10:15. This is Mothers' Day, a day when you should honor her by attending her church. "The Law of Thy Mother" will be the sermon subject in the morning. Service at the Home and Hospital at 2 o'clock. Christian Endeavor meeting at 6:30 o'clock followed by the evening service at 7:20; "Material Rewards of Christ's Kingdom." Wednesday evening service at 7:30 o'clock. We invite you and your friends.

PICKAWAY U. B. CIRCUIT.

Rev. George Weir, Pastor.
458 East Franklin St.

Dresbach Sunday school at 9:30. Class meeting to follow.

Morris Sunday school 9:30. Class meeting to follow. The C. E. meeting will be omitted owing to the baccalaureate service at the Pickaway centralized school.

Pontius Sunday school 9:30. Preaching at 10:30.

"Mothers' Day" May 10, will be observed in all the Sunday schools and the pastor will bring a message at the Pontius church.

BIG UNKNOWN AREA
WILL BE EXPLORED

Science Expects Much
From Expedition.

Washington.—Scientific information of high value will accrue from the exploration of the world's biggest unknown area by the MacMillan Arctic expedition under the auspices of the National Geographic society with the active co-operation of the navy, according to a bulletin issued at the society's Washington headquarters.

"Data which will be collected by members of the expedition and observations made by the United States navy flyers are of potential value to navigators, farmers and fishermen," the bulletin explains.

"The major geographical fact is that the huge unexplored area, a million square miles, lies between two American flags, that which flies over Alaska, and that which Peary planted at the North pole. In this area, more than three times the size of Texas, there is the possibility of a new continent being discovered, and the probability of land of some kind.

Why Land is Expected.

"The existence of this land is postulated on reports of explorers who have skirted the edges of the unknown area, and of observations of tides and ice conditions along this fringe, which conditions indicate the existence of land.

"Should such land exist it will be of great future economic importance in view of the commercial flying that, in years to come, will be done across the Arctic regions.

"The combination of aircraft and radio in Arctic exploration is a new feature of exploration, which not only adds romance and adventure to the undertaking, but which enhances the scientific value of the expedition.

"Hitherto our information about the Far North has been from explorers who had to penetrate it in winter, when the ice was continuous; summer flying makes possible observations of entirely different conditions, with 24 hours of daylight to aid the flyers.

"This same daylight, however, as radio fans will realize, is a handicap to broadcasting, because night time is radio time. The use of the new short wave-length apparatus, under these conditions, is an experiment which will be of value to the new science of wireless communication.

"Upper air temperatures in the Far North are almost as little known as the million square miles which may shroud a long-hidden continent. Summer records of these conditions not only will have a value to future flying but may have a direct bearing on weather forecasting.

"Forecasting weather consists largely in detecting new disturbances as they show up on the western and northwestern borders of the United States, learning their characteristics, and figuring out the paths they probably will follow because of prevailing barometric pressures and temperatures ahead of them.

Tracking Weather to Its Lair.

"The great majority of what the weather forecasters call the 'lows'—that is the areas of subnormal barometric pressure—seem to originate over the warm sea south of the Aleutian islands in the winter, and over the interior of Alaska during the summer. But some of the conditions which cause these 'lows' to be 'built up' in those places and create 'highs' to the east have their birth further north in the polar regions, and a better knowledge of temperatures, pressure and wind changes there undoubtedly would facilitate weather forecasting.

"In the search for the beginnings of its weather the United States is not concerned with the entire polar regions. It is most concerned, it happens, with the unexplored territory which lies north of Alaska.

"Temperatures, pressures and wind conditions—the vital weather factors—are not known in the regions north from Alaska to the pole. Exploration of this area is a preliminary to making detailed observations of these conditions which directly affect farms and orchards of the United States.

Speaking of the navy's part in the expedition, Dr. Gilbert Grosvenor, president of the National Geographic society, said:

"Two of the outstanding men of their generations in the history of polar explorations were officers of the United States navy—Charles Wilkes, who discovered the Antarctic continent on January 19, 1840, and Robert E. Peary, who attained the North pole on April 6, 1909. Both were acting under the orders of the President and secretary of the navy.

"It is a matter of pride to the members of the National Geographic society that the monuments to Peary and Wilkes in the Arlington National cemetery were placed there by their society.

"With these two names may be grouped other navy men whose enterprise and daring have added to our knowledge of the world. Among them are Charles Francis Hall, who pushed north from Thank God Harbor to within less than eight degrees of the North pole in October, 1871, George W. DeLong, who lost his life in polar work; William Francis Lynch, who in 1848 conducted a valuable official survey of the Jordan river and the Dead sea; Matthew Calbraith Perry, who so diplomatically opened Japan to the outside world in 1853, and Thomas Oliver Selfridge who conducted surveys for a canal across the Isthmus of Panama in 1899-72."

Prop Wanted

The colored janitor of a church in St. Louis had a violent temper. He was converted, but sometimes his temper would get the best of his good resolutions. On one occasion when he was repenting of one of his lapses, he made this prayer after he had asked the Lord to forgive him: "O Lord, prop me up on the leaning side."—Christian Witness.

Africa Grew First Coffee.

By far the greatest amount of coffee is grown in Brazil now, though it was not until 1740 that any coffee was grown there. The first coffee was grown in Africa and it was King Louis XIV who first thought of growing it elsewhere. He conceived the idea of growing it in the French West Indian colony of Martinique. From there it was introduced into other West Indian plantations and then by the Dutch into Java and Sumatra. It was introduced into India in 1700.

Notice to Contractors.

Sealed proposals will be received by the Board of County Commissioners of Pickaway County, Ohio, at the office of the County Auditor in the City of Circleville, Ohio, until 12:00 o'clock noon on

MONDAY, JUNE 8, 1925

and the same will be publicly opened on the same day at 1:30 P. M., at said office for all labor and material necessary to build, construct and complete the following contract:

CONTRACT NO. 491.

For furnishing all labor and material for substructure and erecting superstructure at Julian Bridge, over Moccasin Creek, in the town of Salford, Pickaway Township. The plans, specifications and estimates of quantities for doing said work are on file in the office of the County Auditor and the County Surveyor for the inspection of all parties interested in the same.

Each bidder on said contract must deposit with his bid cash or certified check made payable to the Auditor of Pickaway County, Ohio, in the sum of one hundred dollars. This is to show good faith on the part of the bidder or bidders and the same shall become the absolute property of Pickaway County, Ohio, in lieu of all damages should the successful bidder or bidders fail to enter into a contract and bond with the Board of County Commissioners within five days after the award of the same.

All proposals shall be made on blanks furnished by the Surveyor of Pickaway County and shall be addressed to the Board of County Commissioners of Pickaway County, Ohio. The address of bidders shall be given with signatures on the bid. The above work shall be started immediately after signing contract or as soon thereafter as the County Surveyor shall direct.

No proposals will be considered unless it complies with all the rules and regulations herein given.

The Board of County Commissioners reserve the right to reject any and all bids.

By order of the Board of County Commissioners of Pickaway County, Ohio.

**The Ribbon Trail
Won Out**
By DOROTHY DOUGLAS
(Copyright.)

FANNY had many efficient and well developed bumps beneath her crown of tawny hair, but the bump of location was most sadly missing.

That was why, when she went out with canvas and paints to sketch a glorious bit of the forest behind her cottage, she took the precaution to mark her way with bits of white ribbon tied to the trees.

"I might get lost and have to sleep in this great silent forest and get eaten up by deers or something," she told herself, not quite certain as to the diet of deers.

So, guided to and from her beauty spot by the bits of white tape, and wandering further and further afield as her sketches were one by one sent in to the city, Fanny discovered new beauties in that heart of nature.

And on quite the opposite side of that same forest Robert Wade endeavored to capture the elusive imp of poetry and transfer the glory of forest and birds to paper and thence to the reading public. He had succeeded fairly well.

It was during one of his rambles in search of solitude that he noticed bits of white tape tied to the trees, and naturally fell to wondering whose trail it was.

"Children, no doubt," he murmured, but even before the thought had formed he saw, in the dim distance, the back of a young lady whose hair was a riot of gold even in the shadows of the forest, and who was intently painting an idyllic clump of silver birch trees that seemed to have escaped from fairyland into that massive oak setting.

Robert sneaked off quietly. He was enough of a poet to realize the value of solitude, uninterrupted and unsoiled.

However, next morning, very early, before anyone was stirring save a few rabbits and feathered friends, he found that trail and decided to add a few bits of guidance for that fair artist to follow. He tore his handkerchief into bits for the purpose and tied them to trees that led unmistakably near his own tiny cottage.

And also, he made a quaint wee sign and hung it on a big oak just beside his garden gate.

Robert grinned when he viewed his handiwork. The sign read, "Flapjacks and coffee, 10 cents."

It occurred to him that he had better cover the tracks a trifle by tying a few other routes toward that sign. Otherwise the girl, if she followed, would seem to have been lured alone to coffee and flapjacks. Robert tied one or two more that would perhaps catch a straggling couple or so from the high road.

Consequently, when Fanny found a fork in her trail some little distance from her birch clump, and puckered her fair brow in doubt, she took the wrong fork, or perhaps the right one.

Whether right or wrong, Fanny found herself reading an inviting sign. The morning was misty and chill, which had the pleasing effect of making Fanny's hair crinkly beyond bounds, but also of giving her a great desire for a cup of hot coffee.

She entered the rustic gate unsuspectingly and sat down at a still more rustic table. And from out the doorway came big Robert in tweeds and trying to look like the proprietor of a coffee stall.

"Could I have some coffee, please?" asked Fanny.

"No flapjacks?" questioned Robert. "I make wonderful ones."

Fanny did not resist either the smile or the pancakes.

While he was inside making the coffee, four more people burst through the rustic gate in quest of refreshments, and before another three minutes came three more.

Inside the cottage Robert nearly expired. Eight people to make flapjacks and coffee for with one package of flour and one small percolator.

In desperation he flew out to Fanny and talked confidentially to her. She arose with a broad smile and followed him into the kitchen.

"It would be easier and more comfortable to bring them all in here," she told Robert, after a swift glance into the dining room with its open fireplace and blazing logs. "That lone table outside will never seat them. Let's make a kind of family party." She hustled about and used one of those well-developed bumps of management under her tawny hair, and before long a group augmented by four more stragglers sat down to most fragrant—if weak—coffee and flapjacks, that were excellent if scarce. However, Fanny buttered a great plate of bread, and it was an informal but intensely jolly party that sat down.

Robert's eyes positively beamed upon Fanny. Never had he suspected the world of holding so perfect a type of womanhood. He told the whole story to the group of coffee drinkers, and if Fanny found herself blushing hotly it was not from anger.

In fact, there was not one of the strange guests but who knew, then and there, that Robert's rags had blazed a wonderful trail.

And, most of all, Fanny and Robert knew it.

**Hard to Find Anything
That Really Is "New"**

The principle of the rotorship, the most sensational of recent inventions, is acknowledged by its inventor to be based upon an invention of Doctor Magnus, made no less than seventy-five years ago.

Of all proverbs there is perhaps none truer than that there is "nothing new under the sun," and the more you study the history of inventions the more deeply you become convinced of its verity.

Take, for instance, wireless. So long ago as 1842 Professor Morse sent signals across the Susquehanna river merely by means of wires stretched along the banks.

Twelve years later, in 1854, that amazing Scot, James Lindsay, read a paper before the British association in which he boldly stated that if wires were run along the coasts of America and Britain, and properly charged, he could send messages across the Atlantic.

Penny-in-the-slot machines were used in the London coffee houses so long ago as 1820. They were in the shape of a tobacco-jar, which stood upon a table and had a slot in which a penny had to be inserted in order to obtain a pipeful of tobacco. Exactly as in the modern machine, the weight of the coin depressed a lever and released a lock.

The motor car, too, is much more ancient than most of us think, for the first automobile constructed by Cugnot, in 1769, is still on view in a Paris museum. By 1835 numbers of mechanically propelled vehicles were moving upon English roads. In the "Erin," a motor coach of that date, twenty people traveled comfortably.

Four years earlier, in 1831, a horseless coach, constructed by Dance, plied regularly between Cheltenham and Gloucester. It covered in all nearly four thousand miles, and carried three thousand passengers at an average speed of twelve miles an hour.

A submarine boat was exhibited in the Thames in the year 1625, and Fulton, the American inventor, built one for Napoleon.

Even the typewriter is a great deal older than most of us imagine, for there is a record of an application for a patent for a machine of this kind in the same year that Queen Anne died.

Teacher's Way

"A boy's proudest possession is his hat," a Highland Park school teacher said recently. "For that reason, the surest way to make certain a boy will remain after school when told to do so, is to seize his hat. He never will leave without it."—Detroit News.

"Dollar Bird"

While the term "Dollar Bird" may be used in a slang sense in America, the dollar bird is an Australian roller, prevailing blue and black in plumage. It is so called from the large roundish spot of white on its wings, shown in flight.

Meaning of "B. A."

The degree "Bachelor of Arts" is the end of a four-year college course in general college subjects, fulfilling the college requirements for the degree by the student taking certain required courses as well as elective subjects of general culture value.

First American Watches

Aaron Dennison and Edward Howard invented the process of making the parts of a watch by machinery and erected the first building in the world for that purpose at Roxbury, Mass., beginning the manufacture of American watches in 1850.

Look!

this oven works like
a double boiler

You've used double boilers, of course, and know how safely cereals and other delicate foods can be cooked in them. The famous Fresh Air Oven of the Estate Gas Range is built exactly like a double boiler, and distributes heat in the same way. No more "humps"—no more scorching—instead, pies and cakes and cookies that melt in the mouth. It's different—this Estate oven—but it's founded on a principle as old as the double boiler. Let us show you how it works—today.

How To Invest Your Savings

You will never succeed in accumulating a substantial sum of money if you try to be your own banker, for when you keep your savings at home they not only draw no interest, but they may be stolen, burned, lost, or what is more likely—spent.

The safest and most profitable course to pursue is to open an account in our Savings Department, where your money earns 3 per cent interest, compounded semi-annually.

"The Bank that makes you feel at home"—the oldest, best equipped and located institution for the conservation of Savings in Pickaway County, cordially invites your patronage.

DIRECTORS.

ALASKA BOOSTS REINDEER MEAT

Plans to Develop Market to Supply Consumers.

New York.—Alaska has its eye on the gradual falling off in American beef production, and aspires to develop an equivalent of the once famous Texas steer in its own arctic reindeer. Charles DeWitt Brower, a New Yorker who has lived forty-one years in Alaska, told a gathering at the City club recently that New York city already is taking 150,000 pounds of reindeer beef a year, and predicted by the end of 1925 it would consume 375,000 pounds.

What Mr. Brower called a definitely established beef industry in the North rested, he said, upon herds of 300,000 beef-bred reindeer which fatten in a great grass triangle as large as Texas, whose apex is Point Barrow, 200 miles north of the Arctic circle. By 1940 he expected 4,000,000 head.

Nome is the packing-house center, and so far the meat output is only about large enough to meet the domestic demand, according to Mr. Brower. However, the nucleus of a future export business is provided in the growing New York trade, and refrigerator boats are bringing beeves direct to the Hudson river by way of Seattle and the Panama canal.

The reindeer, Santa Claus to the contrary, has become synonymous with steaks and chops in the north country rather than sleigh bells, said Mr. Brower. Sledging there is now done exclusively by dogs, which could traverse stretches reindeer could not.

Beef possibilities of the reindeer, were first discovered when Dr. Sheldon Lewis, a missionary, imported them from Siberia to succor the Eskimos, who were threatened with starvation by extinction of game animals. The present herds have been bred up from the 1,280 original animals brought over Bering sea between 1892 and 1902.

Reindeer calfskin furnishes what Mr. Brower said was the warmest fur for its weight in the world, especially favored for clothing by Eskimos and Chukchees, inhabitants and explorers. Alaskan calves, however, were too valuable as beef and Alaska is arranging to buy skins from the Russian Soviet in Siberia, where there is at present an oversupply of reindeer meat.

Women's Apparel Output in Year, Billion and Half

Washington.—Women's apparel manufactured in this country in 1923 was valued at \$1,500,000,000, an increase of 40 per cent over 1921, the preceding census year.

The valuation as made public by the census bureau was given in two divisions. The value of products of establishments primarily engaged in women's apparel manufacture was placed at \$1,361,272,646, an increase of 39.1 per cent over 1921, while the value of work done in contract shops was \$43,411,189, an increase of 3.6 per cent.

Of the total production value of the primary industry, \$304,944,203 represented skirts, suits and cloaks; \$603,125,272 shirtwaists, dresses and blouses; \$113,612,661 undergarments and petticoats; \$130,562,723 other classes of women's clothing, and \$4,027,784 all other products.

The figures showed the industry to be located chiefly in New York, Illinois, Pennsylvania and Massachusetts.

Wins Bride, Bet, Beanery, but Honey moons Alone

Metuchen, N. J.—Metuchen was agog at the site of a bachelor, who having won a bride, a bet and a beanery, passed the first evening of his honeymoon bowling and showed no inclination to collect the bet.

Philip Kreps, owner of three taxicabs, wagered his machines against the restaurant operated by William A. Fichbaum that, without having any particular girl in mind, he could secure a bride within thirty-six hours.

New Jersey laws require that forty-eight hours elapse between issuance of a marriage license and the ceremony. Not to be circumvented, Kreps and his bride, Miss Aga Estelle Hollis of Highland Park, went to St. George, S. I., where the ceremony was performed.

Conscience Stricken

Clarksburg, W. Va.—City Manager H. G. Otis has received a two-dollar bill and a letter from E. L. Oliver at Kenmore, Ohio. The letter states that several years ago the writer was the cause of breaking of street lamps here and has recently been conscience stricken.

Modern Payroll Check Plan Displacing Old Pay Envelope

Industry's New System Appeals to Employer and Employee.

BLIND MAN evolved the simplest payroll plan of which there is any record in the United States.

The late Charles "Broadway" Rouse, a picturesque New York character, for many years had a store on lower Broadway. He recruited his employees from the down-and-outers. Their daily wage was fixed at one dollar. Every evening Rouse stationed himself at the employees' exit with a bag of silver dollars. As each employee passed, Rouse dipped his hand into the bag and brought forth a shining "cart-wheel."

For Rouse it was an ideal plan. However, changing conditions have brought a woe-ful freight of complications which are combining to supplant the cash payroll with a new system. The payroll check has come into being. The time-honored line filing tediously past the cashier's window on Saturday afternoon is about to pass into tradition, and the bank check is becoming familiar to thousands who previously had known only government currency.

When the Whistle Blows

A feature of the pay-by-check plan that has met with general favor among employees is the distribution of the pay checks to the men while they are at their various tasks. The Saturday noon whistle ends the week. The pay-roll line has gone. There is no quibbling over errors in amounts. The check speaks for itself. There are no lost pay envelopes, and a lost check means merely the issuance of a duplicate.

Nor is the paymaster sorry. A million and a half dollars stolen and 32 men killed by pay-roll bandits is the twelve months' toll that has had tremendous effect in introducing the check plan. Hold-up insurance can cover the loss of money, but there remains the hazard of life to which business men hesitate to expose their employees. Transportation of large sums of cash through the streets, over highways or on trains creates a lure to which all too many bandits are anxious to succumb. The lesson of prevention has been driven home to the business man, and the payroll bandit is finding leaner and leaner pickings.

Time and Money Saved

Heads of large industries who have abandoned the cash system in favor of the check plan state that the community is equally interested with the employer and employee in pay-roll methods.

On the one hand the old practice of paying by cash makes possible extensive pay-roll robberies, jeopardizes lives of paymasters and messengers; imposes unnecessary burdens upon police departments; induces extravagance among hundreds of people; and is generally a net economic loss to the community.

On the other hand, paying by check prevents loss and crime; saves the cost of pay-roll insurance; releases police for normal duties; encourages thrift among employees and increases bank deposits; and makes more capital available for home building and community improvements.

Employees' Viewpoint

Often a natural misgiving as to the reason for the change may influence the employee, say employers. We may be inclined to regard the check as necessitating an additional step in the collection of his pay. Necessity for cashing his check before he is able to spend any part of it may occur to him as a thoroughly practical objection.

In actual practice, however, employers using the check plan say that these difficulties almost invariably disappear when the employee finds himself leaving a portion of his check with the savings bank, and when he finds that getting a check cashed in a country where six billion checks are written annually is a simple undertaking.

Changed Attitude

Surveys by business organizations and large industries have shown that almost invariably, where employees feared to break away from the old pay-envelope system, they have very quickly become far more emphatic in support of the pay-by-check plan, and would oppose any attempt to pay them in cash.

These investigations have further determined that modern check protection methods, safeguarding checks against forgery or alteration, have definitely established this form of currency in the confidence of the employee and the public.

TWO NEW BUILDINGS AT OHIO UNIVERSITY

Athens, Ohio, May 8.—New buildings under construction on the campus at Ohio University. Athens, will honor two former presidents of that institution. The two buildings will be ready and equipped for occupancy at the beginning of the fall term. They are Super Hall, the new engineering and manual training building, and Scott Hall, the future home of the training school.

Dr. Charles S. Super, for whom the former is named, was president of Ohio University from September, 1884 to June, 1896, and again from September, 1898 to June, 1900.

William H. Scott, president of Ohio University from 1872 to 1883 is the one for whom the new training building is named.

Monkey Made Trouble

After a bus driver in London refused to proceed with his bus until a woman carrying a pet monkey got out, the woman was arrested and charged with blocking the traffic.

Fun to Come

Some day somebody with the requisite nerve is going to step out and demand an intelligence test of the men who prepare intelligence tests. It probably will be the laugh of the century.—New York Telegraph.

Box of Agony

Mr. March, a European customs officer in China, records that he saw a man imprisoned seven years in a box, with another eight years to serve.—Family Herald.

All Dieters Blackballed

The "Club de Cent Kilos" is not one of the most exclusive clubs in Paris. The only condition an individual has to fulfill to be permitted to join it is to weigh more than 200 pounds. There are several hundred members, who meet every month in a well-known restaurant, which closes its doors for the day to other patrons, a "sacrifice," it is said, which the proprietor is glad enough to make. The members come from all walks of life. There are distinguished actors like Dramen; celebrated writers like Robert de Flers and Pierre Benoit, taxi drivers, four senators, a field marshal and a leading member of the French Communist party.

Aerial Guide Book

The first "Air Baedeker," or hand-book for air traffic has been issued by a Munich publisher. Postmaster Stephan introduces the book with a statement of present conditions of aviation in Germany. International airplane companies contribute interesting details of their plans and there is information about available landing fields and air harbors. There are discussions of the political conditions necessary to stimulate air traffic, an article on the administration of air companies and many statistics and maps. The writer makes the statement that travel by air is not only the quickest but the safest means of traffic existing today.

Many Sightless

The latest available figures show a total of 52,567 blind persons in the United States, of whom 30,160 were males and 22,407 females. Of this number 45,787 were white, 6,302 negroes and 488 Indians, and 40 Chinese and Japanese. These figures relate only to the enumerated blind, but the census bureau estimates the actual number at 75,000 to 76,000 in 1920, an advance over the estimated number in 1910 of about 5,000.

FIRST NATIONAL

Prize Winning Essay In the American Legion's National Essay Contest.

"Why Communism Is a Menace To Americanism."

(Written by Robert Krumholtz, 15 E. Southern Ave., Springfield, Ohio.)

Communism is that system of social organization in which all productive property is owned by the state or community rather than by the individual. Its principles are directly opposed to Americanism which allows every man that which he earns.

Americanism stands for freedom and justice to all while communism is the essence of injustice since it gives to every man the same no matter if he be an idler or worker.

Deep in the soul of every real man is planted that craving to advance a little higher than his fellowmen. This we call ambition. Communism destroys this worthy and commendable passion at its very roots by compelling all to possess the same. In its stead it promotes laziness, for the people would say, "Why should I work when I only get the same as everyone else whether I work or not?"

It can be truly said that anything that is a failure is a menace and communism from the very beginning of history has proven itself a complete failure as in the case of the ancient Spartans who were no more than trained animals lacking the power to act individually.

History proves that communism can only be successful when all possess unity of belief and therefore Communism could not possibly be successful in our fair land known as the land of the free.

It has been said by those who are considered authorities on the subject that a modern communist is one who possesses nothing and has yearnings for the equal division of unequal earnings; for idler, bungler or both he is willing to fork out his penny and take in your shilling.

America has been held up in history as the first country to give equal rights to women and the honor and respect to her virtues. Communism would degrade woman to the mere rank of common property and the beautiful and venerable name "Mother," would be forgotten.

Oh, true American citizens! if you are worthy of so honorable a name, unite against this common enemy, communism, and crush it like a serpent. Insure to our followers that peace and happiness to purchase which our ancestors did not hesitate to shed their blood.

Vassar Teacher Invents Oil-Refining Furnace

New York.—A new microthermal furnace recently invented by Miss Talia Stadnichenko, instructor in chemistry at Vassar college, will eliminate much waste in oil refining, according to President Henry Noble McCracken of Vassar college. The national research council, he said, had granted Miss Stadnichenko \$7,000 to continue her research in Washington.

The microthermal furnace, said Doctor McCracken, makes possible accurate observation of successive stages in the disintegration of shale or petroleum when subjected to temperature up to 600 degrees centigrade, enabling scientists to determine the exact nature of by-products formed. Such an instrument had been declared by scientists to be impossible, said Dr. McCracken. The device when brought to the attention of Dr. David White, chairman of the petroleum division of the National Research council, so impressed him that he recommended the \$7,000 grant to the inventor to continue her work.

Miss Stadnichenko came to this country as a refugee from Russia a few years ago, said Doctor McCracken, and for three years has been a member of the Vassar faculty.

Belated Service

An Irishman had been unfortunate in his sons, who neglected him and allowed him to die in poverty. When his casket was being carried out by his ungrateful offspring a neighbor remarked, "Sure, it's the first time the byes ever gave the ould man a lift."

"The Store That Treats You Right."

She Knows!

Your wife or sweetheart is a good judge of values. She is probably the heroine of many a bargain rush.

Bring her with you to look at the new Spring styles of

"CLUB CLOTHES"

She will be quick to discern the high class tailoring, the correctness of line and the all-wool quality fabric in which this well known make of clothes take pride.

The feminine eye is keen to discover all the extra details of handwork that make "CLUB CLOTHES" such a remarkable value at

\$25 to \$35

H. B. COLWELL

Successor to COLWELL & KATZ

NOW IT'S GRAY

Gray stockings are spoken of in many quarters as the newest thing in hosiery, and the windows of the smart stocking shops are showing a variety of good-looking gray shades.

From France comes the information that certain very well-dressed women there are wearing extremely thin black silk stockings for many occasions.

Then there is the tendency to wear colored stockings with evening frocks—chosen very often a few shades lighter than the frock. For instance, a rose-colored frock would be worn with light pink stockings, violet or pansy shades would take stockings of light lavender or orchid, the deep shades of green which are coming into favor with certain very smart women for evening would take unto themselves stockings of Nile or lettuce green.

One thing to remember is that, whatever the latest fad in stockings may be, you should seek always a harmonious effect. For instance, there are certain of the beige shades that simply do not go with certain shades of henna, while there are others that are well suited. With a beige frock gray stockings are not well chosen.

Wattle Plantations.

It is a strange fact that Australia, the home of the wattle (acacia), should import nearly \$50,000 worth of wattle bark in one year, and that the chief exporter of the bark to the commonwealth should be South Africa—the country which began its wattle plantations with trees imported from Australia. Cheap labor in Natal, enabling the stripping of bark at one-seventh the cost in Australia, and the need for expensive wire fences in the latter country, probably account for the anomaly. It is worth noting, however, that Victoria has 21,000 acres of black wattle in one of her state forests, and other large areas will be sown shortly.

LADIES' CLUB MEETING.

The Ladies' Social club of the Presbyterian church will meet in the social parlors of the church Monday evening, May 11, at 7:30. A good attendance is desired. A playlet of one act with an all-star cast is part of the splendid program to be given. 9mayd2.

Sales representative with ability to sell high grade household necessity direct to consumer on deferred payment plan. Right man will be granted exclusive operation in Pickaway and adjacent counties and after adding one or two salesmen to his staff, should earn in excess of five thousand annually. Please do not request further information unless you are willing to canvass and can furnish character references. No investment. No competition. No traveling. Permanent proposition. Official of company will visit Circleville soon. If interested, write for further details, giving age married or single, experience in selling and other information about yourself. The Anderson-Kelso company, Marietta, Ohio. 9mayd1.

BIRTHS

To Mr. and Mrs. Arthur Waliser, of Pearl avenue, Friday, May 8, 1925, a son.

Petroleum's Discovery.

In 1850, on the 28th of August, petroleum was discovered at Watson's Flats, Pa., near the head of the Allegheny river. Edwin Drake bored the first oil well, and before the end of the year Drake, under the firm name of Drake & Bowditch, bored through the rock at Titusville to a depth of 70 feet and struck an oil well that yielded 1,000 gallons a day. This discovery started the enormous oil industry in northwestern Pennsylvania.

Good Luck Emblem

On the doorposts of many Jewish houses in England are affixed small brass fittings, not more than three inches in length and less than half an inch in width. The inner portion is hollow, and holds a parchment copy of a Jewish prayer. The emblem is said to bring good luck to the household.

Special Sunday Dinner At New American Hotel

Savory Soup with Noodles
Relish
Queen Olives
Spring Radishes
Roast Prime Beef
Fried Spring Chicken
Snow Flake Potatoes
Baby Patefoi's
Strawberry Short Cake
Mothers' Day Salad

STOP THE RATTLE.

There is nothing more annoying than the rattle of the windows of your closed car. The faultless Shock-Absorber and Anti-Rattler stops the rattle and prevents broken glasses. Easy to install and requires no adjustment.
